

A PowerPal 200 installation in Fife

< a natural fall in the burn is reinforced with a makeshift dam, at one side of which...

...the lade is constructed from fencing material. The inlet funnel can incorporate a debris screen >

< water flows into the inlet duct and spirals past the impeller into the duct pipe

It works first time – we have light!

This PowerPal will be connected to an immersion heater in a nearby cottage. Producing a constant 200 watts, this will provide over 1700 units-worth of hot water a year, saving the electricity that would normally be required to do this.
